

How to Make a Pinwheel

1. Cut out the square.
2. Cut from the four corners along each line.
Be sure to stop where the line stops.
3. Bend each corner with a dot to the center dot. Do not crease (they should stay curved).
4. Attach each corner to the center using a glue stick.
If you want your pinwheel to spin, you can poke a hole through all 4 corners and the center dots then push the thumbtack into a wooden dowel or pencil eraser.
